1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 7 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Winslow US Patent no. 5,116,676. Winslow discloses a substrate provided with a peelable tape. See col. 6, lines 5-68. No patentable difference is readily ascertained.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 99/46337 in view of Winslow US Patent No. 5,116,676.

The World reference, WO 99/46337 is the international equivalent of US Patent No.

6,348,528 to Schlarb et al. Therefor the US Patent will be used in translation.

Schlarb et al discloses applicant's aqueous polymer dispersion composition substantially as claimed. The compositions include a polymer derived from monomers such as (meth)acrylates, vinyl esters, ethylenically unsaturated nitriles and vinyl halides which directly correspond to the monomers used in applicant's invention as set forth at claim 5.

The compositions of Schlarb et al also include a phosphate emulsifier comprising

Art Unit: 1714

ethylene oxide and propylene groups and having a molecular weight of 400 to 2000 g/mol. The compositions are used as coating compositions.

Winslow discloses a removable pressure sensitive adhesive tape that includes a polymer derived from an unsaturated vinyl monomer and a phosphate emulsifier that correspond to those described by Schlarb et al. See col. 3, line 43 through col. 8, line 25. Because the components of Schlarb et al are essentially the same as those set forth in Winslow and the utilities of both inventions are similar in nature, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention to utilize the aqueous polymer dispersion compositions of Schlarb et al as a removable or peelable adhesive in the method set forth by Winslow since adhesives are a type of coating composition.
